OUR GUARANTEE

All items are guaranteed to be true to name and of the size and age indicated. We have been growers of lining out stock now for 90 years and consider our host of old and new customers our greatest asset. We always strive to please and do not consider any deal complete until our customer is satisfied in every respect.

TERMS

Cash in full with order earns 3% discount. Boxing and baling will be charged for at actual cost only. Cash customers will be billed for boxing after shipment.

TO ESTABLISHED CREDIT, 2%-10 days from date of invoice. All accounts due 1st of second month following date of invoice.

RATES

5 of same size and variety earns 10 rates, 25 of same size and variety earns 100 rates, 250 of same size and variety earns 1000 rates.

SEEDLINGS

indicated by 1S - 2S or 3S, meaning the item so indicated is either a 1 - 2 or 3 year old seedling.

TRANSPLANTS

are indicated with an "X" after the item, and each additional X means an additional transplanting, such as XX indicates the item is twice transplanted.

BIRDS EYE VIEW OF NURSERY

Evergreen Nursery Co.

Lining Out Stock

Explanation - Please Note

After each item the letter "1" or "2" indicates the age of the tree and "S" indicates seedlings, such as 1S means one year seedlings, 2S indicates 2 year seedlings. Each "X" after an item denotes the item is transplanted, such as X is once transplanted, XX twice transplanted.

ARBOR VITAE

Am. Arbor Vitae (Thuya Occidentalis)

We have a large quantity of these excellent American Arbor Vitae seedlings and transplants and are offering them at a reduced figure. These are some of the best we have ever grown. Seed was collected by ourselves from upland specimen trees, in this northern Wisconsin area.

UNDERSTOCKS

We are large growers of understocks, supplying many propagators annually with their needs. Juniperus Virginiana is our speciality, but unfortunately we are sold out for this year on that item. However, we can still supply Am. Arbor Vitae, and Norway Spruce in transplanted understocks graded carefully to 3/16 - 1/4 inch caliper at \$9.50 per 100, \$90.00 per 1000. If you need Virginiana understocks for next year write us new for quotations.

FERNS

Also known as Ostrich Plume fern. One of the best of the hardy fern. Perennial. Ideal for shady spots and secluded nooks. Our roots are all No. 1 grade, - large and husky. Make an excellent over the counter winter item to sell, as many people pot them and plant inside.

No. 1 Roots \$10.00 C \$95.00 M

FALL PLANTING

There has been a lot of pros and cons in recent years on fall planting. Some growers swear by it and others will have nothing to do with it. We have done a lot of experimental planting in the fall and in recent years have done considerably more of it and this year we are planning to do the major portion of our lining out in the fall.

We have observed a few things, and are glad to pass on our experience. First of all, it has been our observation that any of the Spruce, Pine and Fir family transplant very well, even as early as the later part of August and certainly the fore part of September. These varieties mature very early, and by planting them the later part of August or the early part of September, you give them an opportunity to make considerable root growth before freeze-up. Immediately following planting, we give them a thorough soaking regardless of the weather. This gives the soil a chance to become firmly compacted and is conducive to an early and prompt root growth. Then during the fall, if we should have dry weather, it is well to water them occasionally. Also, shortly after planting we sometimes scatter oats in the block and cultivate it lightly to cover the oats up as much as possible. This will grow and offer an excellent ground cover for the trees in event we have an open winter, and would prevent to quite an extent heaving in event there is lot of intermittent freezing and thawing. If you don't do this be sure to mulch them with coarse straw, evergreen brush or marsh hay. Do not use leaves, fine straw, or any material that will compact too tightly and do not cover until either the ground freezes or cold weather arrives. On varieties such as Arbor Vitae, and Junipers, we would suggest that they not be planted until the later part of September but otherwise the procedure is the same for we have found that these grow a little later in the season than do the Spruce, Pine and Fir family.

There is no question, but what fall planted trees start growing much earlier in the spring and make a larger growth the first year than do spring planted trees and we also know that over a period of years, one will have as good or better stands of fall planted stock than you will spring, because there is just as much danger of loss from a hot dry summer following a late spring planting than there is danger of injury due to an adverse winter following fall planting.

If properly done and properly handled, we are very enthusiastic about fall planting.

FALL PLANTING

There is a common belief that it is better to plant in the fall than in the spring. The reason for this is that the plants have a longer time to get established before the growing season begins. This is true for many plants, but not for all. Some plants, such as those that are dormant in the winter, may be planted in the fall and will not start growing until the spring. Others, such as those that are active in the winter, may be planted in the fall and will start growing immediately.

One of the main reasons for planting in the fall is that the plants have a longer time to get established before the growing season begins. This is true for many plants, but not for all. Some plants, such as those that are dormant in the winter, may be planted in the fall and will not start growing until the spring. Others, such as those that are active in the winter, may be planted in the fall and will start growing immediately. The plants that are dormant in the winter are usually those that are native to the area. These plants have evolved to survive the winter and are therefore more likely to survive the winter if planted in the fall. The plants that are active in the winter are usually those that are introduced from other areas. These plants may not have evolved to survive the winter and may therefore be more likely to die if planted in the fall. However, there are many exceptions to these rules. Some plants that are dormant in the winter may be planted in the spring and will start growing immediately. Some plants that are active in the winter may be planted in the fall and will start growing immediately. The best way to decide when to plant a particular plant is to consult a local nursery or extension agent.

Another reason for planting in the fall is that the plants have a longer time to get established before the growing season begins. This is true for many plants, but not for all. Some plants, such as those that are dormant in the winter, may be planted in the fall and will not start growing until the spring. Others, such as those that are active in the winter, may be planted in the fall and will start growing immediately. The plants that are dormant in the winter are usually those that are native to the area. These plants have evolved to survive the winter and are therefore more likely to survive the winter if planted in the fall. The plants that are active in the winter are usually those that are introduced from other areas. These plants may not have evolved to survive the winter and may therefore be more likely to die if planted in the fall. However, there are many exceptions to these rules. Some plants that are dormant in the winter may be planted in the spring and will start growing immediately. Some plants that are active in the winter may be planted in the fall and will start growing immediately. The best way to decide when to plant a particular plant is to consult a local nursery or extension agent.

When done and properly handled, we are
not fall planting.

CHRISTMAS TREES

Approximately 25 million Christmas trees are used in this country annually, and the growing of them in commercial plantations is getting to be a very lucrative business. Good planting stock is imperative for success. We grow large quantities of transplants for this very purpose and can supply quality trees at reasonable prices. Plant a few acres every year and you will soon have a nice annual income. We would be happy to advise you on soil, cultural practices, etc.

<u>Douglas Fir</u>		
5 yr. trans.	6-12 in.	12.00 110.00
<u>Norway Spruce</u>		
3 yr. trans.	4-8 in.	5.50 50.00
<u>Scotch Pine</u>		
4 yr. trans.	6-12 in.	9.00 85.00
<u>Norway Pine</u>		
4 yr. trans.	7-12 in.	12.00 110.00

The above are the most used varieties, altho Balsam Fir, White Spruce and other varieties of Pine are also used in some localities. If you are interested write for special quotations.

PLANT NOW FOR A STEADY INCOME LATER

CONTRACT GROWING

With the event of large reforestration, soil conservation and Christmas tree projects small evergreens are being used in large quantities for these purposes. We now have all our operations completely mechanized and are in a position to grow any quantity of evergreens to suit your specific requirements at astonishing savings. Write for more information.
